JOB COMMANDER

RBS

COMPANY OVERVIEW

As a supplier of Waterjet Cutting, CNC Machining and Precision Engineering both domestically and internationally, we are constantly reviewing job processes to improve the customers value for money. Along with this, we have the ability to design and manufacture special purpose machines, taking them from the thought process into a successful operating machine.

JOB COMMANDER REVIEW

“Job Commander is a key part of our business. We started using it around 3 years ago when we went for our first ISO accreditation, and we have just undergone our second certificate, and the auditor was really positive about us using Job Commander.

Job Commander is easy to use, and when our clients come in only remembering drawing number or job part, we can find their previous jobs instantly. It improved our quoting and job costing.

The whole system is working well, and my wife loves it too. It ties seamlessly into our MYOB system”.

John Steck
